

B1 a reflection plate located adjacent to the liquid crystal panel with the light source interposed therebetween, said light source and the reflection plate arranged horizontally with respect to the liquid crystal panel,

wherein said while light is introduced into said liquid crystal panel from a side of said counter substrate of said liquid crystal panel.

B2 9. (Amended) A device according to claim 7 wherein the electronic device is selected from the group consisting of a video camera, a digital camera, a head mounted display, a car navigation equipment, a personal computer, a mobile computer, a cellular phone and an electronic book.

Please add new claims 10-26 as follows:

Sub C2 --10. ~~A device according to claim 7 wherein said liquid crystal panel is a reflection type display panel.~~

B3 11. An electronic device comprising:  
a display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode.

12. A device according to claim 11 wherein said display panel is a reflection type liquid crystal panel.

13. A device according to claim 11 wherein said active matrix substrate and said counter substrate comprise glass substrates, respectively.

14. A device according to claim 11 wherein the electronic device is selected from the group consisting of a video camera, a digital camera, a head mounted display, a car navigation equipment, a personal computer, a mobile computer, a cellular phone and an electronic book.

15. ~~An electronic device comprising:~~

a display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode located on a substrate and coated with resin.

16. A device according to claim 15 wherein said display panel is a reflection type liquid crystal panel.

17. A device according to claim 15 wherein said active matrix substrate and said counter substrate comprise glass substrates, respectively.

18. A device according to claim 15 wherein the electronic device is selected from the group consisting of a video camera, a digital camera, a head mounted display, a car navigation equipment, a personal computer, a mobile computer, a cellular phone and an electronic book.

Sub  
C4

19. ~~An electronic device comprising:~~

a display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps ranged in line,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode.

B3

20. A device according to claim 19 wherein said display panel is a ~~reflection type liquid crystal panel.~~

21. A device according to claim 19 wherein said active matrix substrate and said counter substrate comprise glass substrates, respectively.

22. A device according to claim 19 wherein the electronic device is selected from the group consisting of a video camera, a digital camera, a head mounted display, a car navigation equipment, a personal computer, a mobile computer, a cellular phone and an electronic book.

Sub  
C5

23. ~~An electronic device comprising:~~

a display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps,

~~wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode, and~~

~~wherein said counter substrate has a plurality of inclined surfaces on an opposite side of the active matrix substrate.~~

24. A device according to claim 23 wherein said display panel is a reflection type liquid crystal panel.

25. A device according to claim 23 wherein said active matrix substrate and said counter substrate comprise glass substrates, respectively.

26. A device according to claim 23 wherein the electronic device is selected from the group consisting of a video camera, a digital camera, a head mounted display, a car navigation equipment, a personal computer, a mobile computer, a cellular phone and an electronic book. --
